

## Project 2 - Milestone 4

I was satisfied with the final result I got for this project. I hope to add click button (show the button is clicked) after long click in the later. Also, I want to add more pictures in the note page and not only add pictures by camera but also add files from phone. The layout of the main page is working well on adaptive, but the adding note page won't change if rotates. I hope to fix it later. Oh, also I really want to add colorful marker on the notes (like Gmail), it will be more clearly to find the important level of the notes.
