Project 2 Milestone 1

Description(Inspiration & Goal):

This app is designed for the updated version of the basic note app. I want to build a note app which can show the data is added, and countdown when it added. Also, sometimes I feel that if I could add an image in my note app it will be much helpful. So I hope each note will contain an image.

Intended Audience:

My intended audience will be the people who wanna take a note of something important. Also, it could be used as a digital diary.

Research:

Similar apps exist.
There is some basic notes example of android on GitHub.

Content Needs:

I don't need much content from online since it is a note app. Maybe I need to find how to build calendar source code.

Paper Prototype:

Note

Notes		Calendar

| Today we are ..| | 17/06/ 18 | 57 days |
| Wendy's birth .. . | | 19/06/18 | 55 days |
